Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 21st April* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING SATURDAY, THE 18TH OF APRIL 1891.

TOWARDS the end of the previous week easterly winds had set in over the eastern half of the province, with a slowly falling barometer, and a few unimportant local showers. At the beginning of the present week the easterly winds extended over the whole of North Bengal and Behar and pressure continued to fall, slowly on the 12th and briskly on the 13th, but the difference from the normal never exceeded two or three-hundredths of an inch. With the exception of a few scattered showers in Orissa and North Bengal, rainfall was entirely confined to East Bengal, where the falls were fairly general, and in places moderately heavy, the heaviest being 2·5 inches at Comilla and 2 08 inches at Ramchandrapore. Temperature, though falling at all except the South-West Bengal and a few of the Orissa stations, was generally about 2° above the normal. On the 14th pressure began to rise, the area of lowest pressure closed up towards the north, and westerly winds recommenced over the northern districts. The slightly disturbed conditions disappeared and ordinary hot weather prevailed in all districts with increasing pressure and temperature. A brisk rise of pressure on the 15th, varying from a twentieth in South Behar to a tenth of an inch in North Behar, gave everywhere almost normal pressure with lowest readings in the west of Behar. The westerly current was consequently not so steady, and easterly winds again commenced in North Bengal, while temperature fell at most of the stations in the east and north, but on the following day westerly winds again prevailed with increasing temperature. These conditions continued unchanged till the end of the week, pressure being almost normal, while temperature underwent considerable oscillations but continued above the normal by amounts ranging up to 5°.

Pressure—Was below the normal in the early part of the week, but owing to the brisk rise on the 15th the defect almost disappeared, after which changes were small till the 18th, when there was again a brisk rise, the week closing with excess of about a twentieth of an inch. Owing to the rather large defect during the first half of the week, means are everywhere below the normal by two or three-hundredths of an inch except in Orissa, where the mean distribution is practically normal.

Temperature—Has continued high in all districts, being very little affected by the local rainfall on the 12th and 13th. Mean temperature is everywhere above the normal by between 2° and 3° in all districts except Orissa, where the excess is only ·5°. The highest readings for the various divisions are above 100° except in East Bengal, and the hottest days were the 14th or 15th in Lower Bengal and the 16th or 17th in North Bengal, Behar, and Chutia Nagpur, due to the westerly winds which were on those days well established. Some of the highest readings were—Purneah 109 9° on the 16th, Bancoorah 109·1° on the 14th, Singbhoom 108·4° on the 16th, and Midnapore 108·4° on the 14th.

The actual temperatures registered during the week and their variation from the normal values are best shown in the following table, where the average maximum, minimum, and mean temperatures for the week are given and compared with the normal :—

Rainfall—Occurred at nearly all stations in the eastern half of East Bengal during the first two days of the week, but beyond this, with the exception of a few light local showers in Orissa and North Bengal, the week has been rainless. Falls of more than two inches occurred at Comilla and Ramchandrapore, and of between one and two inches at Fenny, Brahmunberia, and Nasirnagar, and at Bhagatpore in the Julpigoree district. The average fall in East Bengal is 3 inch and in Orissa ·02 inch.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

8. It must be distinctly understood that the passing of this examination does not give any claim to an appointment, and that in making appointments reference will be given to qualified persons who are already employed in the Department.

BORNEO—NORTH-WEST COAST.

Rocky patch on north side of the channel between Labúan and Kuraman islands, and existence of sunken rock in centre of channel, doubtful.

THE following Notice to Mariners (No. 108 of 1891), issued by the British Admiralty, is republished for general information :—

Information has been received from Lieutenant and Commander E. Rason, H. M. S. *Plover*, dated 19th January 1891, of the existence of a rocky patch, lying on the north side of the channel between Labúan and Kuraman islands.

The rocky patch on the north side of the channel between Labúan and Kuraman islands is about one cable in extent, and consists of three pinnacles, which dry 2 feet at low water spring tides, and have 1¾ to 2 fathoms between them, with 3¼ and 7 fathoms near its southern edge. It lies on the 5-fathoms line as heretofore charted (and which now has been extended southward of the rocky patch the distance of about one cable), with Kiamsan point, Labúan, bearing N. N. E. ¼ E., distant 6¼ cables, and Burong islet E. ¼ S.

Approximate position, lat. 5° 14′ 40″ N., long. 115° 8′ 40″ E.

Also that soundings taken in the vicinity of the sunken rock, on which the P. and O. steam-vessel *Formosa* is stated to have struck in 1856, and charted as lying in the centre of the channel between Labúan and Kuraman islands, or in approximately lat. 5° 14′ 25″ N., long. 115° 8′ 20″ E., gave a depth of 33 fathoms at the distance of 1 cable eastward of the reported position, the depth gradually increasing to 40 fathoms about 2¼ cables southward of it. The existence of this rock therefore seems doubtful, and E. D. has been placed against it on the Admiralty Charts.

Shoals on eastern coasts of Masbate and Tayapula islands.

THE British Admiralty has given notice (No. 109 of 1891) of the existence of the under mentioned shoals lying on the eastern coasts of Masbate and Tagapula islands, Philippine islands :—

1. A ledge of sand and rocks extends from Badlai islet, east side of entrance to port Kataingan towards Bugtun island for a distance of 1½ miles, with a breadth of 2¾ cables; the depths on the outer end of the ledge are 19 to 26 feet, but nearer Badlai islet for the distance of about 5½ cables there are several rocks with 3 to 10 feet water on them.

Approximate position of south extreme : lat. 11° 55′ N., long. 124° 4′ E.

2. Bugtun island, southward of port Kataingan, has no shoal ground extending from its coasts at a greater distance than about one cable.

3. A sandbank extends from Balanguingue island, southward of port Kataingan, towards Bugtun island for a distance of 4¼ cables. Near the centre of the narrow channel between these two islands there is a shoal of small extent with 8 fathoms water on it.

4. Shoal ground does not extend to a greater distance than about one cable from Matayon point. Approximate position : lat. 11° 59′ N., long. 124° 3′ E.

5. A shoal composed of coral and stones, and extending about 5 cables in a north and south direction, with a breadth of about 1½ cables, and having 9 feet (the least found) water on it, lies with the eastern extreme of Tagapula island bearing about S.W., distant one mile. Southward of the shoal the water deepens quickly to about 20 fathoms.

Approximate position : lat. 12° 6′ N., long. 124° 16′ E.

Kaipara harbour—New leading beacons at entrance.

WITH reference to Notice to Mariners, No. 104, dated the 29th July 1890, issued by this office, the British Admiralty has given further notice (No. 114 of 1891) that the undermentioned beacons, recently erected on North head and its slopes, are now the leading marks for the entrance to Kaipara harbour :—

The upper beacon on North head, painted black, bears from North head light-house N. by W. ½ W., distant about 1,100 yards ; the middle beacon on North head, painted white, bears from the light-house W. ¾ N., distant about 1,000 yards ; and the lower beacon on a low hill, North sand spit, painted white, bears from the light-house S. W. by W., distant about 2,400 yards.

Two smaller beacons, painted black, are situated on the slope of North head, eastward of the light-house ; the north-eastern bears from the light-house E. ½ N., distant about 950 yards ; the south-western bears from the light-house E. by S. ½ S., distant about 700 yards.

E. ¾ N., lead from seaward through Galatea channel (with 5 fathoms at low water on the Outer bar the least depth), until between North sand spit and Tory shoal ; the two smaller beacons on the slope of North head will then be seen ; and when these are brought in line, bearing N. E. ¾ E., the vessel will be well clear of the northern edge of Tory shoal, and a course may be steered along the land till abreast the light-house, paying attention to any directions given from the signal station near the light-house.

NOTE.—The light-house, now painted white, is no longer a leading mark for entering Kaipara harbour.

RESOLUTION ON THE REPORT ON THE WORKING OF THE EDEN SANITARIUM FOR THE YEAR 1890.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 18th April 1891.

RESOLUTION.

READ—

The report on the working of the Eden Sanitarium for the year 1890.

Read also—

Report for the year 1889, and the Resolution recorded upon it.

The following statement shows the number of patients with their relatives and attendants admitted into the Institution during the past six years:—

	1885.	1886.	1887.	1888.	1889.	1890.
Patients	192	273	344	336	370	316
Relatives and attendants ...	68	120	84	107	122	86
Total ...	260	393	428	443	492	402

Of the 402 persons admitted during the year under report, 57 were in the first, 79 in the intermediate, 164 in the second, and 102 in the third class. Of the 316 persons treated, 270 were adults and 46 children.

2. The Sanitarium was as usual open from the 1st of March till the 30th of November. The daily average number of patients during the nine months was 36·03 against 37·85 in the previous year. The decrease is attributed primarily to the extraordinary rainfall, which, besides being in itself a deterrent to intending visitors, occasioned serious landslips along the line of rail and rendered the journey to Darjeeling inconvenient and difficult, especially for invalids. It is also probable that the influenza epidemic, which prevailed with great severity throughout the station in April and May, prevented many persons who would otherwise have done so from visiting the station during those months. Of the total number of patients treated at the Sanitarium during the year, 274 left the institution restored to health, 36 much improved, 1 not improved, and 5 died. The percentage of deaths to admissions was 1·5 against 1·8 in the previous year. Nineteen surgical operations were performed, all of which were successful.

3. The total income of the year amounted to Rs. 33,154, of which Rs. 31,664 were received from patients, Rs. 1,460 as subscriptions, and Rs. 30 as interest on deposits. A donation of Rs. 400 was made by the Chinese Amban for the improvement of the third class wards. The total expenditure amounted to Rs. 33,125, and the year closed with a balance at the credit of the Institution of Rs. 3,285.

The Superintendent of the Institution, Surgeon-Major O'Brien, the Civil Surgeon of Darjeeling, has taken great interest in its working and is to be congratulated on his successful administration.

INSPECTION OF COOLY DEPOTS UNDER ACT I (B.C.) OF 1889.

GENERAL DEPARTMENT—INLAND EMIGRATION.

Calcutta, the 25th April 1891.

RESOLUTION No. 63.

READ—

The Reports of the Commissioners of Divisions on the inspections of the cooly depôts in their respective Divisions during the year 1890, under Act I (B.C.) of 1889.

The rules framed under Act I (B.C.) of 1889 require the periodical inspection of all rest-houses and depôts provided for emigrants proceeding to the labour districts of Assam, in order to ensure the provision at all times of good and sufficient accommodation, good drinking water and food, proper arrangements for the treatment of the sick, and good conservancy arrangements.

The Act and Rules have now been in force for two years, and the Lieutenant-Governor is glad to observe from the reports received that much good has resulted from them: the sanitary condition and general arrangements of the rest-houses and depôts have much improved, and the mortality from cholera amongst emigrants, which in 1888 was very heavy, has in consequence greatly diminished.

2. During the year 1890 all the rest-houses and depôts, with the exception of those at Nalhatti and Midnapur in the Burdwan Division, at Pubna in the Rajshahye Division, and at Godda in the Bhagulpur Division, were inspected by the officers authorised to do so, and the sanitary and other arrangements adopted for the health and comfort of the emigrants were, with the exceptions noticed below, found to be satisfactory. Defects, when pointed out by the inspecting officers, were invariably remedied with promptness, and improvements made where necessary. The Lieutenant-Governor desires that the rest-houses and depôts which were not inspected during the past year may now be visited and reports furnished, and the failure to inspect in the first instance explained. The rest-houses at Sara in the Pubna district were inspected by the Medical Officer of the Eastern Bengal State Railway, who in almost every instance found fault with the accommodation, supply of water, and sanitary arrangements generally. It is understood that the agents have been requested to remedy the defects. The rest-houses at Parbatipur in the Rajshahye Division were also found fault with by the Magistrate of Rungpur, and the Magistrate of Dinagepur has been asked by the Commissioner to report, after a personal inspection, whether the defects noticed by Mr. Skrine have since been remedied. This report, which will be awaited, should also deal with the proposal made by the Deputy Magistrate of Kurigram to require the provision of shelter at the Railway terminus at Ruth Bazar where, it is stated, the coolies often have to wait for hours for the train. It should also be stated whether the defects which were noticed in the accommodation and sanitary arrangements in the sub-depôts in Shahabad in the Patna Division have been remedied as ordered.

3. The Lieutenant-Governor desires that special care may be taken by the Commissioners of Divisions to see that every rest-house and depôt is periodically inspected in future, and that the rules laid down for the sanitary protection of emigrants are strictly enforced. Agents should be induced to provide each of their coolies with sufficient clothing and a blanket, and some agents already do so.

ORDER.—Ordered that a copy of this Resolution and of the Rules framed under Act I (B.C.) of 1889 be forwarded to all Commissioners of Divisions, except Chittagong, for information and for favour of compliance with the instructions given in the Resolution.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *Humidity* of the atmosphere is expressed as percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 25th of April 1891.

Explanation.—.....indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 28th April* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING SATURDAY, THE 25TH OF APRIL 1891.

At the beginning of the week settled weather prevailed over the whole area. Pressure was rising slowly, and readings were everywhere above the normal by quantities varying from rather less than a twentieth at the northern stations to nearly a tenth of an inch in Lower Bengal. Westerly winds were blowing at all stations, and with cloudless skies temperature was generally rising, and was above the normal by about 4° in the eastern districts. On the 20th pressure fell slowly, but the changes being rather larger in the west of the province, a shallow low-pressure area began to form there, and this has influenced the weather throughout the week. On this day, however, the influence was seen only in the changing wind directions, westerly winds blowing in the western districts, while in the eastern half of the province south or south-east winds prevailed. By the following day a regular cyclonic circulation was established round a shallow low-pressure area over the central districts due to a brisk fall of pressure, and storms began at the extreme eastern stations. Rainfall was almost general in the Dacca and Tipperah districts and scattered in Chittagong, Furreedpore, and Mymensingh. Temperature was still above the normal, but was everywhere falling. The area of lowest pressure was more to the west on the 22nd over part of South Behar and the adjacent part of Chutia Nagpur, so that easterly winds prevailed except in Orissa and parts of South-West Bengal and Chutia Nagpur. The rainfall area extended northwards, light showers being reported from the Darjeeling and Julpigoree districts. Though there was little change on the 23rd either in the pressure distribution or wind circulation, rainfall was much more local, and with the exception of the severe hailstorm at Jessore, no storms of importance occurred. In Mymensingh and North Bengal no rain fell, and in East Bengal only a few light showers were reported, but on the two following days owing, probably, to the eastward motion of the depression, rain again became much more general, and heavy showers were reported from many of the East and North Bengal stations. On the 24th pressure fell slowly and rose slowly on the 25th, when westerly winds were again beginning in the west of South Behar, while elsewhere the easterly circulation continued.

Pressure has generally changed slowly, the fall of rather more than a twentieth of an inch on the 21st being the most important Means for the week are generally above the normal by a few thousandths of an inch except in North Bengal, Behar, and Chutia Nagpur, where the excess is slightly larger.

Temperature was high at the commencement of the week in East and North Bengal, and normal or slightly below the normal elsewhere. After the unsettled conditions appeared and storms began in East Bengal, temperature fell rapidly over the eastern half of the province, but up to the end of the week defect was always small Mean temperatures are very nearly normal, the difference being nowhere more than ·5°. In Orissa and South-West Bengal there is a small excess, and in North Bengal and Behar a small defect, while in East Bengal and Chutia Nagpur means are exactly normal.

The actual temperatures registered during the week and their variation from the normal values are shown in the following table, where the average maximum, minimum, and mean temperatures for the week are given and compared with the normal:—

Rainfall has occurred in all districts except Chutia Nagpur, beginning on the 21st in the extreme east of the province and extending west and north on the 22nd. On Thursday the 23rd there were only a few showers in East Bengal, but on the 24th and 25th the falls were much more general and important, especially in North Bengal, where showers of between half an inch and one inch were comparatively frequent. The average falls for the large subdivisions are below the normal except East Bengal, where with a fall of 2·05 inches there is excess of 1·45 inches. In North Bengal the fall is ·83 inch with defect of ·38 inch, and in the other districts it is less than a third of the normal. In Behar the fall averages only two-hundredths of an inch.

RESOLUTION ON THE ANNUAL INSPECTION REPORT OF FACTORIES IN BENGAL DURING THE YEAR 1890.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 4th May 1891.

RESOLUTION No. 565.

READ the following papers regarding the inspection of factories in Bengal under the Factories Act XV of 1881 during the year 1890:—

Letter from the Commissioner of Police, Calcutta, No. 197, dated the 10th January 1891.

Letter from the Commissioner of the Dacca Division, No. 164J, dated the 28th January 1891.

Letter from the Commissioner of the Presidency Division, No. 78MG, dated the 29th January 1891.

Letter from the Commissioner of the Chota Nagpore Division, No. 1360R, dated the 31st January 1891.

Letter from the Commissioner of the Chittagong Division, No. $\frac{139G\ M.}{IX-5}$, dated the 3rd February 1891.

Letters from the Commissioner of the Burdwan Division, Nos. 60JG and 62JG, dated, respectively, the 15th and 16th February 1891.

Letter from the Commissioner of the Patna Division, No. 120G, dated the 25th February 1891.

Letters from the Commissioner of the Orissa Division, Nos. 202J and 244J, dated, respectively, the 6th March and 1st April 1891.

Letter from the Commissioner of the Rajshahye Division, dated the 17th March 1891.

Letter from the Commissioner of the Bhagulpore Division, No. 442J, dated the 2nd April 1891.

During the year 114 factories came under the operation of the Indian Factories Act in Bengal, viz., 4 in the Patna Division, 2 in the Bhagulpore

Division, 3 in the Rajshahye Division, 24 in the Dacca Division, 41 in the 24-Pergunnahs (Presidency Division), 7 in the Town of Calcutta, 32 in the Burdwan Division, and 1 in the district of Cuttack (Orissa Division). With the exception of the Behar Opium Factory, the Dehri and Somastipur Workshops, three factories in the 24-Pergunnahs, the Sibpur Jute Mills, and the Jobra Workshop in the district of Cuttack, the factories were inspected twice during the year in accordance with rule 8 of the rules framed under the Act. The Somastipur, Jamalpur, and Jobra Workshops and the Sibpur Jute Mills were inspected after the close of the year, the first for the first time and the other three for the second time. A second inspection of the factories in the Dacca district was not necessary, as they worked for only half the year. Of the remaining 38 factories in the 24-Pergunnahs, 16 were inspected once, and the rest were not inspected at all in consequence of there being no Joint-Magistrate at Alipore for the greater part of the year. The rule requiring the inspection of factories at least twice in each calendar year was relaxed in the case of the 24-Pergunnahs, as the Joint Magistrate, who is *ex-officio* Inspector of Factories, has not time to inspect all of them twice a year, and orders were issued for the inspection only once of those which do not employ children. The desirability of appointing a special Inspector for the neighbourhood of Calcutta has recently been suggested to the Government of India.

2. The reports show that the provisions of the Act were attended to in almost every instance, and all necessary measures for the prevention of accidents from machinery were adopted. Notwithstanding these precautions, however, so many as 326 accidents were caused by carelessness, and 8 of them proved fatal. The Lieutenant-Governor notices with pleasure that the condition of factories generally and their management is reported to be highly satisfactory, but regrets to observe that the full number of inspections has not been made in the instances noticed above, and he desires that care may be taken to ensure full compliance with the rules in future years, and to provide for the punctual submission of the inspection reports by the 15th February. Some reports of the past year's inspection were received later than that date.

3. The attention of Commissioners of Divisions is also invited to the provisions of Act XI of 1891, by which Act XV of 1881 has been amended, and which will come into operation from the 1st January 1892.

ORDER.—Ordered that a copy of this Resolution be submitted to the Government of India, Home Department, for information. Ordered also that a copy be forwarded to all the Commissioners of Divisions and the Commissioner of Police, Calcutta, for information, and that the Commissioner of the Dacca Division be informed, with reference to his enquiry, that the term "mechanical power" in clause (*a*) of section 2 of the Act of 1881 applies to premises in which hand-worked Boomer-presses are used.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

Calcutta, *the 5th May* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING SATURDAY, THE 2ND OF MAY 1891.

THE disturbed conditions which commenced about the middle of the previous week and were causing nearly general rainfall in East Bengal and Assam, have continued almost throughout the present week. Up to the 27th the effects were confined almost entirely to the eastern districts, but from the 27th to the 29th storms, with rain usually light in the central and western districts, occurred over the whole province, while in East Bengal the rainfall during these days was more heavy and general. The pressure distribution and wind circulation have undergone no serious changes, except that towards the end of the week a high-pressure area developed over Lower Bengal and the head of the Bay, causing a weakening in the wind current and a tendency to westerly directions in Behar. With the formation of this high-pressure area about the 29th the disturbed conditions began to disappear, and rainfall entirely ceased in Behar and Chutia Nagpur, while in South-West and East Bengal, though showers were still falling, they were not so heavy nor so general. Temperature has changed very irregularly, falling or rising according to the occurrence or absence of storms, but as a rule readings were below the normal till nearly the end of the week, when a general rise set in. Pressure has been relatively low in the districts near the centre or to the west of the centre of the province, and this low-pressure area became more distinct on the 27th when a brisk fall occurred in South-West Bengal, and caused the frequent storms over the whole province during the three succeeding days. During these days south-westerly winds blew in Orissa, South-West Bengal, and Chutia Nagpur, and easterly winds in North Bengal and Behar. In East Bengal directions were more changeable, varying between south and east. On the 30th, when there was excess in pressure of nearly a tenth of an inch in Lower Bengal, westerly winds were blowing in South Behar, and easterly directions prevailed only in Assam and the adjacent parts of North Bengal. Pressure continued to rise till the end of the week, when there was excess of about ·16 inch in Orissa and ·14 inch in Chutia Nagpur and South-West Bengal, but the wind circulation underwent no further change except that velocity was slowly diminishing. On May 2nd, the last day of the week, there was defect of about 2° in temperature in all districts except North Bengal and Assam, where there was a variable excess ranging up to 5°.

Pressure has been above the normal throughout the week, and excess from being small at the beginning steadily and slowly increased till at the end of the week it was more than a tenth of an inch in all districts and about three-twentieths in the south-west corner of the Bay. Means for the week are consequently considerably above the normal by about a twentieth of an inch, the largest excess being ·078 inch at Cuttack.

Temperature was comparatively low during the middle of the week, and on an average for the whole week has been below the normal in all districts. Defect in Assam is 2·5°, in East Bengal 2·2°, in Chutia Nagpur 2°, in Orissa, South-West Bengal and North Bengal ·6°, and in Behar ·2°. The days when maximum readings were highest were either at the beginning or end of the week, but the lowest minimum readings were very irregular as to date, being due to the scattered storms which were more or less general throughout the week. The highest reading in Behar was 105·4° at Dehree on the 26th, in Chutia Nagpur 106·3° at Chyebassa on the 26th, in Orissa 107·4° at Cuttack on the 26th, and in South-West Bengal 105·4° at Midnapore on the 29th.

Rainfall was almost general in the eastern districts from the 26th to 30th April, scattered and light in Behar from the 27th to the 29th, and in Orissa, South-West Bengal, and Chutia Nagpur from the 29th till the end of the week. In North and East Bengal it had almost ceased on May 2nd except in Mymensingh, Patna, and Bogra, where some heavy falls occurred. The mean fall for the week in East Bengal is nearly an inch above the normal, but elsewhere there is defect, large compared with the actual fall in Chutia Nagpur and Behar, and small in Orissa, South-West and North Bengal. Some heavy falls were reported from Tipperah in the early part of the week, but elsewhere in the eastern half of the province they were rarely more than moderate in amount. The total falls for the week exceed 3 inches at the following stations:—Buseerhat, Sonamukhi, Magoora, Chittagong, Rangamati, Patuakhally, Fenny, Furreedpore, Munshigunge, Naraingunge, Joydebpore, Agartola, Commilla, Brahmunberia, Subornakhally, Sherepore, Alipore Duars, Cooch Behar, Matabhanga, and Buxa.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

RESOLUTION ON THE REPORT OF THE HEALTH OFFICER OF THE PORT OF CALCUTTA FOR THE YEAR 1890.

No. 1227Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 2nd May 1891.

RESOLUTION.

READ—

A letter No. 1873, dated the 23rd March 1891, from the Sanitary Commissioner for Bengal, submitting the report of the Health Officer of the Port of Calcutta for the year 1890.

The subjoined table shows the number and description of vessels inspected by the Health Officer of the Port during the past five years—

Inspections.

YEAR.	INWARD-BOUND VESSELS INSPECTED.		OUTWARD-BOUND VESSELS INSPECTED.		Total number of inspections.
	Foreign-going.	Coasting.	Foreign-going	Coasting.	
1886	660	52	660	144	1,516
1887	630	100	699	172	1,601
1888	568	88	629	179	1,464
1889	559	112	598	174	1,443
1890	530	117	576	171	1,394

These figures do not accord with that portion of the explanation given in the report which attributes the decrease in the total number of inspections to less frequent inspections of coasting steamers. The largest decrease appears under the head of vessels bound inward from foreign ports. His Honour thinks it important that the coasting vessels which carry large numbers of native passengers should be frequently inspected by the Health Officer.

Ventilation of crew spaces.

2. During the year under review the Health Officer submitted particulars of vessels which on inspection he found to have badly-ventilated crew accommodation. In regard to the vessels trading with the United Kingdom, the Board of Trade have taken steps to ensure compliance with the Regulations relating to accommodation and ventilation issued under the provisions of section 9 of the Merchant Shipping Act, 1867. The ventilation of the crew spaces of the vessels trading with Indian and Chinese ports has in several cases been improved at the instance of this Government.

Bathing accommodation for native crews.

3. The Health Officer brings to notice the absence of properly-protected bathing accommodation for native crews in vessels trading with European ports. In warm weather they bathe on the open deck, but this practice must, in Dr. Macleod's opinion, cause much sickness and suffering in a cold climate. The list of such vessels which the Health Officer is preparing will be awaited, and the Lieutenant-Governor desires that when submitting it he will describe what arrangements are, in his opinion, necessary for the health of the native crews.

Sickness and mortality among European seamen.

4. The number of European seamen who arrived in port was 19,496 against 20,662 in the year before, but the daily average population was 1,679 against 1,629 in 1889. Including deaths out of hospitals, the death-rates per mille of the past five years were as follows:—

	Cholera.	Other causes.	Total.
1886 ...	11·61	33·53	45 14
1887 ...	10·03	16·91	26·94
1888 ...	10·59	27·15	37·74
1889 ...	11·07	20·29	31·36
1890 ..	8·33	15·49	23·82

5. The number of admissions into hospitals and deaths from different diseases during the five years ending with 1890 are shown in the table below:—

	1886.		1887.		1888.		1889.		1890.	
	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.
Cholera	49	26	29	19	26	15	33	17	15	14
Diarrhœa	185	...	116	1	106	2	142	2	51	...
Dysentery	106	3	70	...	34	4	61	4	24	...
Fever, enteric	12	4	8	2	2	...	1	...	4	1
,, malarious	321	3	220	1	120	1	227	2	167	3
,, simple	155	...	65	...	82	1	79	...	85	...
Scurvy	7	...	4	...	3	...	...	...	3	...
Small-pox	...	...	1	...	1	...	...	...	...	...
Sunstroke	4	1	5	1	19	5	6	1	4	1
Other diseases	1,875	34	1,201	11	1,182	21	1,267	17	1,066	19
Total ...	2,714	71	1,719	35	1,575	49	1,816	43	1,419	38

The total number of natural deaths fell from 51 in 1889 to 40 during the year under review. Of these 38 occurred in hospital and two out of hospital.

The number of cholera cases was much lower than in the previous years, but out of 15 cases 14 proved fatal. The death-rate (8·33) per mille calculated on the daily average population was lower than that of the previous nine years, except 1885, when it fell to 4·13, and was lower than the quinquennial mean (9·28).

No case of small-pox was admitted during the year, and there has been no death from this disease since 1881.

There were three cases of scurvy admitted into hospital, of which two were mild; the third was that of a man who had been suffering from the disease for 8 months prior to his admission.

There were three deaths from sunstroke during the year. Of these one occurred in hospital and two on board ships in the port. Since the close of the year rules have been made under the Indian Ports Act, 1889, for regulating the employment of persons engaged in cleaning or painting vessels or in working in the bilges, boilers or double bottoms of vessels lying in the port. It is hoped that these rules will reduce the number of cases of sunstroke occurring amongst seamen.

The number of deaths from drowning was 14 against 15 in the preceding year.

6. The following table exhibits the admissions into hospital since 1883 of European seamen suffering from venereal diseases:—

	Total admissions.	Rate per thousand.
1883	237	127·4
1884	184	109·2
1885	170	100·4
1886	417	179·2
1887	228	120·4
1888	183	121 1
1889	186	114·3
1890	248	147·7

The number of admissions and the rate per mille were higher than those of the previous seven years, except 1886, when the figures were exceptionally high. The Health Officer brings to notice that the experience of commanders of vessels is that cases of this kind have increased since the repeal of the Contagious Diseases Act, but the evidence available is insufficient for the purpose of arriving at a just conclusion.

7. There were 32 deaths at sea against 36 in the previous year.

8. The mortality from all causes among the native floating population is shown in the following statement, the averages being calculated as in the preceding years on a population of 25,000:—

Sickness and mortality among the native floating population.

	Total deaths.		Ratio per mille.	
	1890.	1889.	1890.	1889.
Cholera	55	80	2 14	3·2
Bowel-complaints	3	9	·11	·36
Fever, malarious	8	5	·31	·2
Do., simple	20	8	·78	·32
Other causes	31	27	1·20	1·08
Total ...	117	129	4·54	5·16

Of the 117 deaths that were reported during the year, only 30 occurred in hospital. This is attributed to the unwillingness of natives to go to hospital for treatment. The accuracy of the figures, however, as observed in the Resolution on the Annual Report of the Health Officer for the year 1889, cannot be relied on.

9. Twenty-eight deaths are reported to have occurred amongst lascars at sea during the year against 13 in 1889. Two of those occurred on coasting vessels, and the remaining 26 on foreign-going ships against 2 and 11, respectively, in the year before. The rates were ·36 and 3·37 per mille against ·5 and 1·81 in the preceding year, and calculated on the total population, the death-rate was 2·12 against 1·29 per mille.

10. The S.S. *Sultan* arrived in the port twice during the year with pilgrims from Jeddah, and on each occasion there was small-pox on board.

Pilgrims.

11. The general improvement in the conservancy of the foreshore of the river, noticed in the Resolution on the Annual Report of the Health Officer for the year 1889, continued during the year. The drain at King's Road, Howrah, is reported to be in the same state, and the Sanitary Commissioner for Bengal observes that the nuisance will continue to some extent until the drainage of the town is diverted away from the river in a westerly direction. As observed in that Resolution, it is desirable, in the interests of the shipping as well as in the general interests of sanitation, that the town of Howrah should have a proper system of drainage, and the matter will be brought to the notice of the Municipal Department of this Government.

Conservancy.

The Health Officer reports that to prevent the pollution of the river it was settled, in consultation with the Municipal authorities at Howrah, that the drain which runs by the side of the latrine in Messrs. Ahmuty and Company's Factory should be bridged. It should be reported whether this work has now been carried out.

The outflow of liquid sewage from Fort William into the river still continues. The scheme for the discharge of the Fort sewage into the Calcutta sewers, which was prepared at the request of the Military Department of the Government of India, is under the consideration of that Government.

Dr. Macleod in his report has again referred to the insanitary condition of a brick-field at Ghoosery. Since, however, the report was written, the Municipal Commissioners of Bally, within whose jurisdiction the brick-field is situated, have taken steps to put a stop to the nuisance.

12. There was an increase in the number of corpses found floating in the river, accompanied, however, by a satisfactory decrease in the number of carcasses of animals.

Corpses and carcasses.

13. No complaint was made during the year about the supply of municipal filtered water to the European shipping. The crews of the steam-tugs plying in the port were not supplied with filtered water; but on the matter being brought to the notice of the owners of the vessels, steps were taken by them to provide hydrant water for their crews.

Water-supply.

14. The Health Officer has submitted the usual statement showing the comparative mortality in the Town and Port of Calcutta for the past three years. The circumstances are so different, however, that any analysis of the figures for purposes of comparison would be useless.

Comparative statistics of Port and Town of Calcutta.

15. The Lieutenant-Governor endorses the commendation bestowed on Dr. Macleod by the Sanitary Commissioner. His Honour is pleased to learn that the Sanitary Inspector, Babu Nando Lall Haldar, continued to discharge his duties satisfactorily.

O T. BARROW,

Accountant-General, Bengal.

No. 128Mne., dated Calcutta, the 12th May 1891.

THE following report of the 16th quarterly inspection of the Dock Works at Kidderpore, which are being carried out by the Commissioners of the Port of Calcutta, is published for general information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal, P. W. Dept.

QUARTERLY INSPECTION OF THE KIDDERPORE DOCK WORKS.

Dated Calcutta, the 29th April 1891.

From—LIEUT.-COL. A. D. MCARTHUR, R.E, and H. N. C. CLOETE, ESQ,
To—The Secretary to the Government of Bengal, Public Works Department.

WE have the honour to report that, in accordance with the orders of the Government of Bengal received with the Under-Secretary's letter No. 1054M. of the 21st instant, we made the sixteenth quarterly inspection of the Kidderpore Dock Works on the 27th idem.

The usual tabular statement and the index plan showing the work done during the quarter ending 31st March 1891, and the total amount of work executed from the commencement, which have been prepared by the Superintendent of the Dock Works, are already with Government. The present state of the various works are reported in the following paragraphs:—

Sixty feet Lock.—This work is now completed. Against an estimated quantity of masonry, viz, 2,229,490 cubic feet, the aggregate quantity executed up to end of the quarter under review was 2,252,896 cubic feet. 1·6 per cent. of excavation and 2·9 per cent. of masonry were done during the quarter. The wooden jetties at the head of the lock are approaching completion, and the entrance to the lock is being dredged.

Eighty feet entrance.—This work is also completed. 715,000 cubic feet of masonry executed up to end of last quarter against an estimated quantity of 711,071 cubic feet. 6·3 per cent. of earthwork was excavated during the quarter. The entrance to the lock has to be dredged. The jetty heads are well in hand.

Double entrance to Dock No. 1—Is completed as previously reported.

Tidal basin.—The coping of the quay walls of which a portion only remained has been completed. Against an estimated quantity of 23,601,352 cubic feet of earthwork, only 19,291,148 cubic feet has been executed, leaving about 18·3 per cent. of excavation still to be done, which will be executed by dredging. It is reported that this work will be taken up very soon. About 9·9 per cent of excavation and 1·9 per cent. of masonry were done.

Graving Dock.—As reported last quarter this work is finished; pumping engines have been erected, and the engine house is under construction, satisfactory progress having been made.

Government Graving Dock—Is completed.

Dock No. 1.—The additional works rendered necessary by the slips reported during the quarter ending 30th September 1890 have been taken in hand, and are now being carried out in the manner recommended by the Committe. About 8·7 per cent. of excavation still remains, which will be carried out by dredging.

Boat Canal.—The lift lock is finished; the lock and supply sluice at Chetla is also complete, with the exception of the gates and over-bridge which are in course of erection. Also some revetments remain to be done. The two road bridges are now open to traffic, and the foot bridge across the lift lock at the Budge Budge road is in hand. The canal is finished, with the exception of the removal of the cross dams. The excavation of the canal down the centre of site of Dock No. 2 has been taken in hand.

Subsidiary works.—As reported during the last quarter, the hydraulic engine station is finished, and an addition is being made for the accommodation of the electric light plant, most of which has been received from England.

The main pumping station is completed. No progress has been made with the iron work of the cargo sheds, owing to, it is reported, materials not having yet arrived from England. Work will be put in hand as soon as they are received.

Expenditure.—The total expenditure up to end of the quarter under review is reported to be Rs. 2,15,56,575-13-8, of which Rs. 1,89,97,841-8-6 represents outlay on works and Rs. 25,58,734 is on account of land.

Sanitary.—During the quarter under review, the health of the workpeople was fair. The daily average number of workmen employed was 4,784, among whom there were 29 deaths during the quarter, thus showing a death rate of 24·39 per mille per annum.

General Remarks.—We consider that the progress on the works in hand during the quarter under review has been very satisfactory, and that, so far as we could judge, the quality of work was all that could be desired.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF APRIL 1891.

Meteorology of the month.—Quite at the close of March, after a long period of unsettled conditions with frequent rain and unusually low temperature, weather had become fine and settled and of the usual hot weather character. For about the first twenty days of April there was no material alteration in the meteorological conditions beyond the rapid increase of temperature which took place at the commencement of the month, by which the defect which had obtained previously was rapidly neutralized. Winds generally remained south-westerly and westerly in most districts, except in the extreme east of the province of Bengal, where southerly and south-easterly winds were blowing. Pressure oscillated from day to day by small or moderate amounts, but during this period no barometric depressions of any kind were formed in Bengal or passed into the province from Northern India. Humidity generally remained moderate, and the sky was only lightly to moderately clouded, and there was an almost complete absence of storms; so that rainfall for the first three weeks of April was confined to a few light and local showers of no practical importance, which fell principally in East Bengal.

On the 20th April pressure fell slowly, but the changes being largest in the west of the province, a shallow low-pressure area began to form there, and this at once commenced to influence the weather. On this day, however, the influence was seen only in the changing wind directions, westerly winds blowing in the western districts, while in the eastern half of the province south or south-east winds prevailed. By the following day a regular cyclonic circulation was established round a shallow low-pressure area over the central districts, due to a brisk fall of pressure, and storms began at the extreme eastern stations. Rainfall was almost general in the Dacca and Tipperah districts and scattered in Chittagong, Furreedpore, and Mymensing. The area of lowest pressure was more to the west on the 22nd over part of South Behar and the adjacent part of Chutia Nagpur; so that easterly winds prevailed except in Orissa and parts of South-West Bengal and Chutia Nagpur. The rainfall area extended northwards, light showers being reported from the Darjeeling and Julpigoree districts. On the evening of the 22nd a violent hailstorm visited Jessore which lasted an hour, causing considerable damage to property. Though there was little change on the 23rd either in the pressure distribution or wind circulation, rainfall was much more local, and no storms of importance occurred. In Mymensingh and North Bengal no rain fell, and in East Bengal only a few light showers were reported; but on the two following days, owing probably to the eastward motion of the depression, rain again became much more general, and heavy showers were reported from many of the East and North Bengal stations. The disturbed conditions continued practically up to the close of the month. Up to the 27th the local storms with rainfall were confined almost entirely to the eastern districts, but from the 27th to the 29th storms with rain occurred over almost the whole province, though the rain was usually light in the central and western districts, while the rainfall in East Bengal was more heavy and general. Quite towards the end of the month a high pressure area developed over the head of the Bay and Lower Bengal, when the winds fell off in force and became more westerly in Behar. The disturbed conditions then began to disappear, and rainfall practically entirely ceased in Orissa, Behar, and Chutia Nagpur, while in South-West Bengal showers became less numerous and lighter, though up to the close of the month showers accompanying local storms were very numerous in East and North Bengal.

Pressure—Was decidedly above the normal at the end of March, but early in April a fall set in, and by the 3rd or 4th it became below the normal. A rise then set in, and from the 4th to the 11th of April the mean pressure was in excess by from four to six hundredths of an inch; it then again became below the normal, but a brisk rise set in on the 15th, and by the 18th pressure was about a twentieth of an inch in excess. For the period from the 19th to the 25th, the mean pressure was almost normal, the variations only being equal to a few thousandths of an inch, after which a steady rise set in, and pressure was above the normal until the close of the month. For the whole month, therefore, the mean pressure has been above the normal, the excess generally equalling about two or three hundredths of an inch. This excess pressure is fairly equally distributed over the whole of Bengal, but in Assam the general pressure appears to have been almost normal.

Temperature—Was rather largely below the normal at the commencement of the month, and for the week ending April 4th, there was an average defect in the mean temperature of 4·1. In the period from the 5th to the 11th of April for the first time for many weeks the mean temperature had become above the normal for the period, but the excess only averaged seven-tenths of a degree. In the period 12th to the 18th the mean temperature had become from 2° to 3° above the normal. With the rainfall which accompanied the unsettled conditions which commenced about the 20th, temperature fell decidedly, and the mean temperatures became very nearly normal for the period and remained so up till almost the close of the month in all districts except East Bengal, where, owing to the number of storms and the heavier rainfall, temperature became rather below the normal. For the whole month, therefore, the variations of the temperature from the normal have been comparatively small, and in no case do they exceed half a degree. The mean temperature has thus been very slightly in excess of the normal in Orissa, East and North Bengal, South Behar, and Assam, and very slightly below it in South-West Bengal, North Behar and Chutia Nagpur, and practically the mean temperature for the whole province has been normal.

Rainfall.—Practically the whole of the rainfall for the month fell after the 20th and 21st. The falls have been largest in East Bengal, where an average amount of 5·18 inches was received, which is almost 30 per cent. in excess of the normal amount. In all other divisions the falls have been less than the normal amounts. North Bengal has received an average fall of 1·89 inches or about two-thirds the normal. South-West Bengal has received an average of one inch, or only half the usual fall. In Orissa the fall has equalled about half an inch or two-fifths the normal, while in Behar and Chutia Nagpur the falls have only averaged between one and two-tenths of an inch, and generally they only equal about a fourth of the normal fall. The number of rainy days during the month has also been largely below the normal in all divisions, except East Bengal.

In Assam decidedly heavy rain has been falling during the month, and Sibsagar has received 10·01 inches, Silchar 8·42 inches, and Dhubri 5·47 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of April 1891 :—

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

Explanation.—.....indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding sums in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 12th May* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 9TH OF MAY 1891.

CONDITIONS had been distinctly disturbed in North, East, and parts of South-West Bengal and Orissa for a considerable part of the previous week, and practically the same conditions have obtained almost throughout the present week. On the 3rd pressure fell briskly over the whole province, while temperature had risen by amounts of from 1° to 3°. Winds were rather more easterly than usual, and wind force was decidedly lower than it had been. On this day the local storms with rain were mainly confined to South-East and North Bengal, the remainder of the province being practically rainless. On the 4th pressure had again fallen briskly over the whole province, the fall generally equalling about six hundredths of an inch. Temperature had also risen in all districts, the increase varying from one to three degrees Winds on this day had became much more southerly than they had been, but the local storms were comparatively few in number, except in North Bengal and in parts of East Bengal and Orissa, from which districts many stations reported moderately heavy rain on the morning of the 5th. The fall of pressure and the rise of temperature had practically ceased on the 5th, but winds again became strongly easterly, while wind velocities at the inland stations commenced to increase. Rather numerous local storms with rain occurred on the evening of the 5th in East and North Bengal and in parts of South-West Bengal; Kushtia on the morning of the 6th reporting 2·65 inches of rain and Cox's Bazar 2·13 inches, while falls exceeding an inch were recorded at Chooadanga, Lalgola, Joydebpore, Pubna, Nattore, Alipore Dooar, and Bhagatpore. On the 6th pressure had commenced to rise slowly, and the distribution was practically normal, while temperature had risen and was above the normal by from 4° to 7° in all districts except in the south east corner of the province. Winds continued strongly easterly, and their velocities had increased, and on this day rather strong winds were blowing in the north-west angle of the Bay. Again a few local storms with rain occurred in East, North, and South-West Bengal, but the falls were generally not large. On the 7th pressure and temperature continued to rise by small amounts, wind directions remained unchanged, while velocities again increased at the head of the Bay and in Lower Bengal, and winds became decidedly strong Scattered showers again occurred, which were most numerous in East Bengal. On the 8th pressure began to fall briskly in all districts except the west of the province, and a very shallow depression formed in the north of South-West Bengal, while temperature also commenced to fall on this day. The wind circulation was not quite so strongly easterly in Lower Bengal, but elsewhere it was unchanged, and winds continued of considerable strength. On this day, however, the number of local storms which occurred was very small, and only very few stations received rain. On the 9th pressure continued to fall slowly, and the shallow low pressure formed on the 8th still existed over parts of South-West Bengal. Winds remained almost unchanged in direction and velocity, while temperature fell by about 3° in the east of the province and rose elsewhere. Again showers occurred on this day, of which reports were received on the 10th, the local storms with rain being numerous in East, North and South-West Bengal, North Behar and Assam, while Orissa, Chutia Nagpur, and South Behar were practically rainless. It will thus be seen that conditions have been generally disturbed with occasional rain showers almost throughout the week in East, North and South-West Bengal and in Orissa, while fine weather with an almost entire absence of rain has prevailed in Behar and Chutia Nagpur.

Pressure.—The mean pressure for the week has been nearly normal, though the slight variations in different districts have been irregular both in character and amount. Pressure has been generally slightly below the normal in Behar and South-West Bengal, while it has been above it elsewhere, but the variations as a rule do not average more than a hundredth of an inch.

Temperature.—As previously stated, temperature has generally been in excess of the normal, and the mean for the week shows an excess amount for the whole province of Bengal of two and-a-half degrees. The largest excess has been registered in South-West Bengal, where it has equalled 4·4°, and in Chutia Nagpur, where it has been 3·9°. In North Bengal temperature has been almost normal, while in Assam a defect of 1° has been registered.

Rainfall.—Notwithstanding the frequent rainfall during the week, the amounts which have been received have been in all cases below the normal. East Bengal has received an average fall of 1·62 inches, or about an inch less than usual for the period. North Bengal has received an average fall of 1·21 inches, which is about three fourths the usual fall. Orissa has received half an inch, or half the usual fall, and South-West Bengal also about half an inch which, however, only equals about a third of the normal amount. Behar and Chutia Nagpur, as above stated, have been practically rainless. In Assam, Sibsagar has received 3·25 inches, Dhubri 3·07 inches, and Silchar 2·57 inches, during the week.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 9th of May 1891 :—

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·2° lower; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

Where all these particulars have been correctly observed, the Deputy Registrar shall admit the appeal and register it in the Register of Appeals from Original Decrees.

III. In any case in which an appeal has been returned for amendment under Section 543 of the Code of Civil Procedure, it shall be the duty of the Deputy Registrar to attest the amendment by his signature.

8. No affidavits in answer shall ordinarily be read which have not been filed with the proper officer of the Court 24 hours before the sitting of the Court on the date fixed for the hearing of the applications.

6. When the declarant in any affidavit speaks to any fact within his own knowledge, he shall do so directly and positively, using the words "I affirm" (or "make oath") "and *say*."
7. I solemnly declare that this my declaration is true, that it conceals nothing, and that no part of it is false.

MISCELLANEOUS.

III. Except under the special orders of a Division Bench, no document being an exhibit to an affidavit or verified petition or the materials for any application shall be given back unless the document be an original document, in which case it may be taken back on an order of the Court, a certified copy being retained.

IV. Applications under Chapter XXI of the Code of Civil Procedure shall be made in open Court to the Division Court hearing appeals from the Group to which the case belongs.

V. Applications for leave to appeal *in formâ pauperis* shall be presented in open Court to the Division Court hearing appeals from the Group to which the case belongs, in accordance with the provisions of Chapter XLIV of the Code of Civil Procedure.

VI. Every petition of appeal, whether against an Original Decree, or against an Appellate Decree, or against an Order, which may not have been filed within the limited period of 90 days, or accompanied by the copies of the decrees, or of the judgments and decrees, as required by Law, or in respect of which any indulgence is asked, shall be

presented by way of Motion in open Court to the Division Bench taking appeals from the Group to which the appeal belongs, and such Division Bench shall at once proceed to pass thereon such order as the case may require.

VII. When a Vakeel retained to appear and plead for any party to a suit or an appeal is prevented by sickness or engagement in another Court from appearing and conducting the case of his client, he may appoint another Vakeel to appear in his place, so that his client may not be unrepresented at the hearing, but such Vakeel shall not so appear unless he shall have first obtained the special permission of the Division Bench.

VIII. In any case in which the party employing a Vakeel, or his agent, after due notice fails to pay the amount of the estimated costs for preparing briefs containing the papers connected with the case on appeal necessary to enable the Vakeel to conduct the case properly, the Vakeel or Vakeels after notice to such party or his agent, or by leave of the Court, may withdraw from the case.

IX. A Vakeel may also for any other sufficient cause or after such notice to his client as may enable him to appoint another Vakeel, by leave of the Court but not otherwise, and on such terms as the Court may order as to refunding any fees he may have received, withdraw from the further conduct of the case.

X. The Deputy Registrar shall attest all vakalutnamas and Mukhtyarnamas in all cases in the High Court in its Appellate Jurisdiction.

XI. The Deputy Registrar shall bring to the notice of the Division Court any wilful neglect on the part of any Vakeel or Mukhtyar attached to the High Court to attend at his office.

XII. The Deputy Registrar shall address the Lower Courts by letter with regard to all matters not requiring a judicial order of the Court.

XIII. The Deputy Registrar shall dispose of all returns to orders of the Court in which a reference to the Court for special orders is not required.

XIV. The Deputy Registrar shall see that the proceedings and other processes of the Court are issued without delay, and that remindefs and calls for explanation are despatched, whenever the return of the Lower Court is not made within the prescribed period.

XV. The Deputy Registrar shall note any irregularity committed by the Lower Courts in the preparation and endorsement of the decrees of their Courts, and submit his report of such irregularity to the Division Bench.

The following instructions have been issued to Subordinate Courts in matters connected with Appeals to the High Court.

NOTE. (1) The records of cases called for by the High Court on appeal from the judgments and orders passed therein shall ordinarily be despatched within seven days from the receipt of the order calling for such records. In the event of any delay occurring in their despatch, a reply should be sent explaining the cause of the delay, and the date on which it is expected that the requisition of the Court will be complied with.

(2) Records of execution cases sent up in appeal to the High Court shall be invariably submitted complete,—that is, all the papers connected with them in the Lower Courts, whether Original or Appellate, should be sent up, so that they may be at hand, in case the Court should find it necessary to refer to them.

(3)* In Civil cases sent up to the High Court in appeal, in which the preparation of maps may have been necessary for the elucidation of any points of importance, such map should be pasted upon cloth before being despatched with the records. Much inconvenience has been caused at times by the tattered condition in which maps in important cases have come before the Court.

4† District Judges in the Lower Provinces are authorised to transmit by service post the processes issued in all cases appealed either to the High Court or to Her Majesty in Council. It is to be understood that the processes thus issued should not be registered. If registered, they must be prepaid for by stamps.

(5) (*a*) A covering letter forwarding any Vernacular paper (*e.g.*, Judicial Proceeding, Report of a Subordinate Ministerial Officer, and such like) should never be addressed to the Court.

(*b*) The transmission of Vernacular papers should be discontinued as much as possible.

(*c*) No Vernacular paper should be addressed to the Court unless it refers to some Judicial Proceedings before the Court, or is a copy of some proceeding forming part of some Judicial record. In such a case the Vernacular paper should be sent with a short memorandum written on the face of it.

(*d*) Reports of Subordinate Ministerial Officers are obviously intended only for the Superior Officer to whom they may be addressed, and should never be transmitted to the Court either in original or by copy. If it be necessary to address the Court regarding the subject-matter of any such report, the contents of that report should be embodied in an English letter.

S. F. DOWNING, *Principal, Civil Engineering College.*

SEEBPORE, *the 25th April* 1891.

ORDERS BY THE VICE-CHANCELLOR AND SYNDICATE OF THE CALCUTTA UNIVERSITY.

1. The following additions and alterations in the University Regulations, having been sanctioned by the Senate and approved by His Excellency the Governor-General in Council, are published for general information :—

(i) The following foot-note has been added to the marginal note to the Entrance application form :—

Entrance Examination.

"A High School is a school recognised by the University as qualified to send up candidates to the Entrance examination.

"A High School under public management is a High School which is under the direct management of Government, or of Officers or Committees acting on behalf of Government, or of Boards exercising statutory powers, and in which the staff of teachers is appointed and dismissed by Government, or by such Officers, Committees, or Boards."

The word "High" has been inserted before "school" in the marginal note itself.

(ii) The following words have been added to the second foot-note in page 73 (appendix A) of the Calendar for 1891, "or which appears to the Syndicate to be from any cause injurious to the interests of sound education and discipline."

(iii) In the B. A. Regulation, para. 7, A iii, instead of the words "A second Language (defined as in the F. A. course)," the following has been substituted :—

B. A. Examination.

"One of the following languages—Greek, Latin, Sanskrit, Pali, Hebrew, Arabic, and Persian."

(iv) The words "as soon as possible after the examination" have been substituted for the words "at such time as the Syndicate shall determine (the date to be approximately notified in the Calender for the year)," in paras. 7, 6, and 7 of the Entrance, F. A., and B. A. Regulations, respectively.

Entrance, F. A., & B. A. Examinations.

(v) The following addition has been sanctioned to the foot-note to para. 2 of the Regulations for the F. A. and B. A. examinations :—

"This percentage shall be calculated on the total number of lectures in each subject delivered in the Institution from the commencement of the academical year after the summer vacation. If a student is transferred from one Institution to another in the course of a year, the percentage of attendances in the second Institution shall be calculated on the total number of lectures in each subject delivered in that Institution after the date of the transfer certificate. If a student fails to enter an affiliated Institution before the 1st August in any year, his attendance for that year shall not, except with the special sanction of the Syndicate, be counted."

The foot-note so amended has been incorporated in the text of the Regulations, and will affect candidates for the examinations of 1893.

(vi) In para. 4 of the F. A. Regulations, and in para. 5 of the B. A. Regulations, the words "he has prosecuted a regular course of study for six months since the date of the last examination to which he was admitted" have been omitted, and the following words added in their place :—

"His name has been on the rolls of that Institution for six calendar months since the date of the last examination to which he was admitted, and that he has attended 66 per cent. of the lectures delivered in the Institution during those six months in each of the subjects in which he is to be examined."

This change will affect candidates for the examinations of 1892.

(vii) In the M. A. application form after the word "Religion" the words "whether he is a candidate for the Government Scholarship tenable in England" have been added.

(viii) In para. 2 of the B. L. Regulations the words "in a school of Law recognised by the Syndicate for not less than three academical years, two of which shall be after passing the B. A. examination" have been omitted, and the following have been added in their place :—

"In an institution affiliated in Law for not less than two academical years after passing the B. A. examination. No candidate shall be considered to have prosecuted a regular course of study unless he has attended at least 24 lectures in each of the groups of subjects prescribed in para. 6, the minimum number of lectures to be delivered in each group being 36."

This change will affect candidates for the examination of 1893.

(ix) In para. 5 of the B. L. Regulations the following words have been inserted between "and" and "oral," "may also be partly."

(x) The following foot-note has been added to para. 2 :—

No candidate shall be allowed to count attendance of more than one lecture in the same day.

This refers to all future lectures.

(xi) The following groups of subjects have been substituted for the groups prescribed in para. 6 of the B. L. Regulations :—

1. The Principles of Jurisprudence; the History and Constitution of the Courts of Law and Legislative authorities in India.

2. The Law relating to persons in their public and private capacities, including the Law of Testamentary Succession.

3. The following Rules and Regulations have been passed by the Senate respecting the new Gilchrist Scholarships tenable in Europe by Natives of India :—

GILCHRIST SCHOLARSHIPS TENABLE IN EUROPE BY NATIVES OF INDIA.

[*These Scholarships are open to Women upon exactly the same conditions as to Men.*]

1. Three Scholarships of the value of £200 per annum will be awarded, one every year, to candidates who are natives of India (within the meaning of Section 6* of the statute 33 Vic., Cap. 3), or of the "Native States" of India. They shall each be tenable for three years at any University or any Science or Technical College in Europe (approved by the Trustees in each case), on condition that the Scholar shall undertake to go through the course and pass the examinations necessary for obtaining a definite Science degree or diploma as may be prescribed by the Trustees. The nomination to these Scholarships will rest with the Universities of Calcutta, Madras, and Bombay in rotation, subject to the conditions hereinafter specified.

* The provision in the section is as follows :—"That for the purpose of this Act, the words 'native of India' shall include any person born and domiciled within the dominions of Her Majesty in India, of parents habitually resident in India, and not established there for temporary purposes only; and that it shall be lawful for the Governor General in Council to define and limit from time to time the qualification of natives of India thus expressed."

2. A scholarship will be given every third year on like conditions, the nomination of suitable candidates for which will rest with the Universities of the Punjab and Allahabad jointly. Each of these Universities may submit to the Government of India the name of one candidate, and the actual nomination to the Scholarship shall be made (from the names submitted) by the Government of India.

3. The scholarships will be given (during the next few years) in the following rotation :—

1891. Calcutta, Punjab, and Allahabad.
1892. Bombay.
1893. Madras.
1894. Calcutta, Punjab, and Allahabad.
1895. Bombay.
1896. Madras.

4. Each scholar will be provided by the Government of India with a free passage to England. The Gilchrist Trust will provide a return passage (at the end of the three years) at a cost not exceeding £50, provided that the scholar shall have fulfilled the conditions of his scholarship; but the scholar will not be entitled to claim any difference between the actual cost of passage and the amount above named.

5. Each scholar must enter into a written engagement to submit to such regulations as may from time to time be issued by the Gilchrist Trustees for the guidance of the scholars.

The tenure of the scholarships will be strictly dependent on good conduct in Europe, and on satisfactory progress being made in study. The Gilchrist Trustees reserve to themselves the right of finally deciding whether a scholar has or has not committed a breach of the Rules and Conditions on which his scholarship is held, as also all questions which may from time to time arise, whether expressly provided for in the Rules and Regulations or not. They further reserve to themselves the power of altering the conditions of the scholarships, or of altogether withdrawing them, if they shall think fit. Due notice of any alterations will be given, and changes will not be made in such a manner as to affect the interests of students already appointed to scholarships.

7. One of the Gilchrist Trustees* will personally see each Gilchrist scholar as soon as possible after he has reported his arrival at the office of the Trustees, and will confer with him upon the course he may propose to persue, and the University or College to be selected.

RULES FOR ELECTION TO THE GILCHRIST SCHOLARSHIPS.

1. Candidates for the Gilchrist scholarships must be natives of India within the meaning of section 6, the Statute 33 Vic., Cap. 3, and must be under 22 years of age on the 1st July in the year in which the selection is made. The scholarships are open to women upon exactly the same conditions as to men.

No person holding a Government of India scholarship tenable in England is eligible for a Gilchrist scholarship, or shall continue to hold a Gilchrist scholarship after he has accepted a Government of India scholarship.

2. The selection of a scholar shall take place not later than the month of June in the year in which a scholarship is placed at the disposal of the University.

(2) B. A. with Honours.
(3) B. E., including the optional subjects, Mathematics, and Natural Science.

4. Candidates for the examinations mentioned in the preceding rule, who are desirous of competing for the next Gilchrist scholarship that is placed at the disposal of the University, shall intimate the fact to the Registrar at the time they submit their applications for admission to those examinations, and shall state whether they have the consent of their families to proceed to Europe in order to prosecute a course of scientific study there.

5. It shall be the duty of the examiners at each of the examinations mentioned in rule 4 to state which of the candidates are in their opinion fit and proper persons to be selected for the Gilchrist scholarship.

6. The candidates recommended for the scholarships under rule 5 who are under the prescribed age shall be called upon by the Registrar to submit, not later than the 1st May in the year in which the selection is made, the following certificates :—

(1) Certificates of good conduct, signed by persons of respectability and position.
(2) Certificates of their knowledge of the English language, signed by one or more of the Professors of the Colleges in which they have been educated.
(3) Certificates of their physical capacity to undergo the course of life and study they will have to follow in Europe, signed or countersigned by a Presidency or Civil Surgeon.

7. Each candidate shall submit with these certificates a declaration that it is his intention, if successful, to proceed to England forthwith, to reside in Europe for a period of three years, unless compelled to return earlier either by ill-health or some other cause which may seem sufficient to the Gilchrist Trustees.

8. In the year in which the selection is to take place, the names, certificates, and declarations of all the candidates recommended by the examiners under rule 5, and who are under the prescribed age, shall be laid before a Committee of the Syndicate consisting of not more than three members, who shall have power to call for reports from the Principals and Professors of the College in which the candidates were educated, and to make such other enquiries as they think fit, and who shall recommend to the Vice-Chancellor one of the candidates for selection.

9. On the nomination of a scholar being completed, the Registrar shall communicate his name and address to the Secretary of the Gilchrist Trust, 17, Victoria Street, Westminster, London, S. W.

(2) Every scholar shall, on arriving in England, submit for the approval of the Gilchrist Trustees a statement showing the general course of study he proposes to follow; and specifying the University or College to which he proposes to proceed. After consideration of such statement, the Trustees will decide at what University, or Science or Technical College in Europe the scholarship shall be tenable, and will prescribe the course to be gone through, and the degree or diploma to be obtained. Every scholar shall at once take steps to enter himself at the University or College which the Trustees shall have approved. The course finally prescribed by the Trustees shall not be changed without their sanction.

(5) The scholarship allowance, at the rate of £200 a year for three years, will be paid quarterly, in advance, by the Gilchrist Trust, commencing from the date when the scholar reports his arrival in England.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; p, passing temporary showers; t, thunder; ≤, lightning; d, drizzling rain.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last
The *cloudiness* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers
are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional tation for the period in question during the
past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a nth of an inch fell.

for the week ending Saturday, the 16th of May 1891.

Calcutta, *the* 19*th May* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 16TH OF MAY 1891.

THE meteorological conditions which had existed during the previous week had been somewhat disturbed, and rather numerous local storms with moderate to heavy rain had occurred in East, North, and South West Bengal and in Assam. During the present week these disturbed conditions have continued, and, if anything, have rather extended in area and intensified, and thus almost general, and in several cases rather heavy, rain has been reported on several days during the week; the rainfall in East, North, and South-West Bengal and in North Behar being decidedly abundant and indeed above the normal.

The meteorological changes which have taken place from day to day have been of comparatively little importance. On the 10th instant pressure was increasing, and there was a tendency for low pressure to be produced over Orissa, where pressure was below the normal, while elsewhere over the province it was in excess. Temperature had fallen decidedly, but the general temperature of the province was nearly normal On the 11th pressure had changed irregularly, a rise of nearly a tenth of an inch having taken place in Orissa, and having thus filled up the low pressure which was previously developing. Elsewhere pressure had generally risen more slowly, except at the northern and north-eastern stations, where there had been a fall. On this day, therefore, pressure was generally above the normal, the excess being largest in the southern and south-western districts. Temperature also had fallen rather rapidly in the southern and south-western districts, while it was rising elsewhere. On the 12th pressure had again fallen, the fall being largest in the western and south-western districts, while temperature had commenced to rise generally. On the 13th pressure had fallen over the whole province, the fall at some of the eastern stations equalling a tenth of an inch, while the fall was very slight at the south-western stations Temperature had generally risen except in North Bengal, and was considerably above the normal at the western stations, though below it slightly in the centre and east of the province. On the 14th pressure had fallen slowly at the southern and south-western stations, while it had risen elsewhere, and temperature had fallen at the eastern and northern stations and risen in the south and west of the province. It will thus be seen, that for the first five days of the week the meteorological changes as above described were of decidedly variable nature, the pressure changes, for instance, being generally of different nature in different parts of the province, and of opposite character from day to day. During the whole of this time moist south-easterly and easterly winds were blowing over the greater part of the province, and numerous local storms, in most instances accompanied by rain, occurred in almost all divisions of the province; the rainfall, however, being smallest in amount in South Behar and Chutia Nagpur. On the 15th, however, the pressure changes were much more regular, and a general rise of small amount was reported, while on the 16th the pressure changes were exceedingly small, and as a rule not larger than a hundredth of an inch, pointing to the fact that weather conditions were becoming less disturbed. On the 15th, and particularly on the 16th, the number of local storms reported was very much smaller than before, and they were practically entirely absent in Orissa, South-West Bengal, Behar, and Chutia Nagpur on the latter date. With the decrease in the rainfall temperature commenced to rise rapidly at the end of the week, and from the 15th to the 16th a general rise in the mean temperature of about 3° was reported. At the close of the week pressure was above the normal by from 0·03″ to 0·08″. Temperature was slightly below the normal at some of the stations in North Bengal and Assam, while elsewhere it was in excess by amounts ranging up to 5° at the western stations.

Pressure.—The mean pressure for the week has been in excess of the normal usually by about 0·02″. This excess is fairly regularly distributed over the whole province.

Temperature.—The mean temperature for the week has been almost normal in South-West Bengal, North Behar, and Orissa, it has been below the normal by from one to two and-a-half degrees in East Bengal, Assam, and North Bengal, and above by similar amounts in South Behar and Chutia Nagpur. Taking the opposite variations into account, the mean temperature for the whole of Bengal has only varied from the normal by about a tenth of a degree.

Rainfall.—An average rainfall of nearly three inches has been registered in East Bengal, which is more than twice the normal fall. In North Bengal a fall of two and-a-quarter inches has been recorded, or about 60 per cent. in excess of the normal. In South-West Bengal the falls averaged one and-a-half inches, or nearly twice the normal amount. In Orissa and North Bengal an average amount of nearly three quarters of an inch fell, the fall being in distinct excess in North Behar, but of about the usual amount in Orissa. In South Behar the fall averaged a third of an inch, or almost exactly the normal amount, and the only division in which there was anything like a defective fall was Chutia Nagpur, where about a fifth of an inch fell, which is less than half the usual fall for the week Particularly heavy falls have occurred during the week at the following stations:—Ranaghat, Jungipore (Moorshedabad), Naraingunge, Moonshigunge, Comilla, Kishoregunge, Panchbibi, Nattore, and Cooch Behar.

In Assam, Sibsagar for the whole week has received no rain, Silchar has reported 1·92 inches, and Dhubri 3·85 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 16th of May 1891 :—

MEMORANDUM.

Monthly statistics of deaths registered in forty-five districts of Bengal for the month of February 1891.

THE total number of deaths registered during the month of February 1891 in the districts of Bengal amounted to 137,553, against 143,492 in the preceding month, 112,524 in February 1890, and an average of 101,630 in the corresponding months of the previous five years (1886—90) These figures correspond to annual death-rates of 24·96, 26 04, 20·40 and 18·48 per 1,000, respectively, of the aggregate population of those districts, which is 65,859,534. The death-rate of February 1891 is 6·48 higher than the mean rate of the corresponding months of the past five years 1886—90, and is also higher than the rate of the corresponding period of any of the past five years with which comparison is instituted, but compared, with the preceding month, it is 1 08 less, *vide* the figures below :—

	February 1886.	February 1887.	February 1888.	February 1889.	February 1890.	Monthly average of five years 1886—90.	February 1891.	January 1891.

Of the total deaths, 72,991 (ratio 26·76 per 1,000) were males and 64,562 (ratio 23·28 per 1,000) females. As usual, the registered results were, on the whole, greater among the male than among the female population. Relatively 115 males died to every 100 females, calculated on the proportion such mortality bears to the total male and female population.

The following table shows the highest proportions of deaths registered during the month of February 1891, arranged in order of sequence and compared with the mortality of the corresponding month of 1890 :—

The total mortality during the month under review from the several registered death-causes is compared in the following table with the mortality from those causes in the corresponding month of 1890 and the average of the five years 1886—90 :—

	Ratio per *mille* during— Feby. 1891.	Feby 1890	Monthly average of five years 1886—90.
Cholera	2·76	1·44	·96
Small-pox	·24	·12	·10

Dysentery and Diarrhœa	·60	·72	·60
Injury	·12	·12	·12
Other causes	3 72	3·12	2 88

The mortality of February 1891 under the heads cholera, small-pox, fever and other causes shows an increase over the mortality from these causes of the two past periods with which it is compared.

The total deaths from *cholera* numbered 15,305, against 15,691 in the preceding month. Howrah suffered the most proportionally to population, 10 32 per mille per annum ; next 24-Pergunnahs 9 24 ; then Nuddea 9 ; Jessore and Dinajpur 6·12 each ; Tipperah 5·64 ; Midnapore 5·52 ; Dacca 5·28; Purneah 4·80; Burdwan and Rungpore 4·68 each ; Khulna 4 44 ; Bogra and Faridpore 4·20 each ; Rajshahye 3 60 ; Bankura, Hughli and Serampore 3 36 each ; Manbhum 3 12 ; Backerganj and Maimansing 2 28 each ; Maldah 2·76 ; Murshedabad 2 52 ; Julpaiguri and Balasore 2·40 each, and Birbhum 2·16. In one district, Mozufferpore, no death from cholera was recorded.

Small-pox was the cause of death in 1,538 instances, against 1,037 in the month before Considered with the population, Cuttack suffered the most with a death-rate of 3·24 per 1,000 per annum, then Midnapore with 1·56, followed by Chittagong 1·08. Eight districts were absolutely free from this disease, viz. Birbhum, Khulna, Rajshahye, Rungpore, Pubna, Darjiling, Julpaiguri, and Sonthal Pergunnahs.

Fevers caused 95,436 deaths and *diarrhœa* and *dysentery* 3,611, against 99,599 and 3,909, respectively, in the preceding month. All the districts suffered more or less from both

ailments, but Julpaiguri returned the highest fever death-rate, 32·16 per mille per annum, and Howrah the highest rate, 6·24, from diarrhœa and dysentery. Next to Julpaiguri the highest fever death-rates occurred in Serampore 29·04, Midnapore 28·44, Dinajpur 27·96, Darjiling 27·72, Singbhum 27·24, Hughli 26·64, Noakhali 26·52, Rungpore 26·04, Jessore 24·84, Bogra 24·36, Purneah 23 88, Rajshahye 23·76, Chittagong 21·12, Khulna 21·, and Maldah 20·76.

The deaths from *injuries* numbered 962, against 966 in the preceding month, and from "*All other causes*" not specified 20,701, against 22,290. Puri returned the highest death-rate from the unspecified diseases coming under the head "Other causes," viz. 16·56 per 1,000, next Backerganj 10·80, then Balasore 10·44.

The following table shows the death-rates among the five principal *classes* which comprise the population of the Bengal Province, viz, Hindus, Mahomedans, Christians, Other classes, and Buddhists arranged in order of sequence and compared with the mortality among these classes in corresponding month of 1890:—

	Ratio per *mille* during—	
	Feby. 1891.	Feby. 1890.
Hindus	25·32	20 52
Mahomedans	24 60	20·88
Christians	21·84	13 68
Other classes	21·00	13·44
Buddhists	20 64	21·36

With regard to *Age*, infants as usual perished in the largest numbers, 174 48 per 1,000 of population per annum; next came old persons (60 years and upwards) with a death-rate of 74·88 per 1,000. The lowest death-rate occurred between the ages of 5 and under 10 years and 10 and under 15 years, 10·20 each per 1,000.

Detailed information regarding the mortuary statistics of the forty-five districts of Bengal during the month under review will be found in the statement appended.
